

## Aware a white roof can save you money?

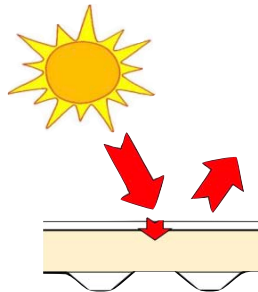

Now, more than ever, we're all more conscious of spending. Your roof can have a financial impact in multiple ways.

If you need **LEED®** or **LEED-EB** certification, this system helps to gain credits.

White is the only single-ply membrane rated by the EPA **Energy Star®** roof products program. Even after three years of exposure, it retains more than 86% reflectivity.

The **Duro-Last Cool Zone®** roofing system has an **Energy Star** ranking of 87.5% reflectivity of the sun's energy. On summer days, UV & IR rays may cause black roofs to hit 180° which lowers the effective R-value of insulation and hinders air conditioning units resulting in higher operating and maintenance costs. Installing a white roof results in energy cost savings.

The Precision Roofing team completes all work, from free estimate, through installation and inspection. No sub-contractors here, so you're assured that who you hire is who you get.
