

Rock-Ply®

The *Rock-Ply* 50 mil thick membrane is printed with the gravel-like appearance of a ballast roof.

Shingle-Ply®

When conventional shingles aren't an option, the *Shingle-Ply* 50 mil membrane is imprinted with a shingle design in either sandstone tan or slate gray.

Vinyl Rib Roofing System

For the architectural look of a standing seam metal roof, there's the Vinyl Rib Roofing System.

A *Duro-Last*® single-ply membrane is installed and separate vinyl ribs are heat welded to that. Compared to standing seam metal roofs, this system offers waterproofing and more effective insulation options.

DESIGNER ROOFING OPTIONS

Most roofs we install specify the proven, popular *Duro-Last* membrane in white.

Did you know *Duro-Last* also offers exclusive options for when aesthetics are a factor? These are still membranes so the incredible performance and long-term durability are built in, but they are imprinted with unique designs.

And for all *Duro-Last* membranes, there is a choice of four other colors in addition to white.
