

## Thinking about adding solar panels to your roof?

Your business can receive a federal tax credit equal to 26% of a solar project cost done this year.

### KEY REASONS TO CONSIDER ADDING SOLAR ON YOUR ROOFTOP.

With a 30-year lifespan, solar energy costs are predictable. Unlike public utility rates that continue to rise; about 3% annually in the past ten years.

Reduce your company's carbon footprint and be a leader in being a good steward of the planet.

**YOUR  
BRAND**

Enhance your brand image - customers want to do business with and employees want to work for companies that practice sustainability.

Rooftop mounted solar modules use the building's existing structure and electrical system vs. adding materials/space when installed on the ground.

*Note: we recommend installing a new roof before adding solar panels.*

We heat seal all pre-made rack flashings for solar panels on a membrane to ensure integrity of the roofing system.

The volume of power your company wants to generate determines the quantity of solar panels for your rooftop.
